PROFESSIONAL SUMMARY

A seasoned product and technology leader with 13+ years of experience solving complex, high-stakes problems for world-class organizations including Google, Lenovo, and Ferrari. Starting as a software developer with a passion for end-to-end system design, a natural progression through technical architecture and cross-functional strategy led to the role of Head of Product. Deep expertise in software automation and automation testing, with a track record of driving results at every stage of the product. Built a career by identifying and closing gaps not just in technology, but across product, marketing, and sales.

HIGHLIGHTS

Product Strategy & Vision

- Worked in the Founder's office to break down product vision into strategy, roadmaps, and actionable items, micro-managing operations to ensure initiatives align with the broader vision.
- Architected an AI Assist Add-On leveraging computer vision and machine learning to automate PLM and ECADD applications (CATIA, SolidWorks, Solid Edge, DELMIA, Windchill, Teamcenter, etc.). This was a market that was previously untapped. This contributed to around 30% of total revenue and over 70% of new sales in the last three years.
- Architected and single-handedly developed a test automation tool for SAP GUI applications, creating a new revenue stream and opening doors with enterprises seeking end-to-end automation that includes SAP GUI.
- Delivered a major product release, reducing the release cycle from 2.5 years to 4 months, while simultaneously stabilizing releases so the product needed near-zero post-release fixes.
- Progressively reduced release cycles from two years to three months to weekly releases.
- Architected and partly developed Sahi Pro Genaina, an AI-augmented test automation platform that seamlessly integrates human insight with artificial intelligence.

Engineering & Problem Solving

- Solved the challenge of automating applications inside Google's intranet by authenticating Uber Proxy and MOMA login, directly enabling Waymo (Google subsidiary) to onboard as a customer.
 - Made test execution 4x faster for Ferrari on PLM and ECADD applications, forming the foundation of a lasting business relationship.
 - Solved 1,000+ customer issues for a global clientele including Lenovo, Sony Ericsson, Hasbro, Bose, Signal Iduna, MetricStream, BMC, and Infosys.
 - Implemented handling of HTTP Content Security Policy to allow Sahi Pro's proxy-injection approach to work without relaxing application security policies.
 - Built and maintained solutions for external proxy, proxy PAC, WebSocket, JWT, CORS, OAuth, BLOB downloads, SSL certificate errors, XHR, Fetch, and browser-specific behaviors.
 - Evaluated and integrated Apache HTTP Client as the default client for web browser automation.
 - Developed solutions for: browser extension automation (Firefox & Chrome, including Whatfix and Salesforce CRM), Flutter web automation, Telnet, and IE Mode in Edge (unlocking customers in healthcare and finance).
 - Implemented solutions for client authentication schemes (Kerberos, NTLM, Negotiate, Basic, Digest), reducing related customer issues from 2 per week to just 2 in the last 4 years.
 - Created a migration tool to move automation projects from Tricentis Tosca to Sahi Pro (logic developed from first principles, without AI).
 - Leveraged LLMs to successfully plan and execute migration of automation projects from TestComplete to Sahi Pro.
-

Process & Team Improvements

- Eliminated the need for a separate development team for maintenance through three sustainable practices: upstreaming QA responsibilities, empowering support teams to resolve issues independently, and promoting documentation, unit tests, peer testing, and live feature demos.
- Reduced customer-reported issues from 40 per month to 1 per month by taking full ownership of development-side customer support and using interactions as a structured product feedback loop.

Cross-functional Collaboration

- Served as the primary liaison between engineering and product, design, QA, marketing, sales, customer support, business development, content, and executive stakeholders.
- Collaborated with the marketing team across webinars, exhibitions, events, user meetups, SEO, ABM, email nurture, and design, thus ensuring product messaging consistently aligned with company ethos.
- Helped set up the pre-sales tech team and co-developed 30 collateral pieces to support pre-sales activities. Also, I completed countless successful POCs that directly contributed to sales growth.
- Collaborated with content writers to produce technical blogs. Launched Sahi Pro Academy with certification courses, now serving thousands of learners.

EXPERIENCE

Head of Product, Sahi Pro, November 2018 – Present

- Acting as CEO's proxy to realize the product vision, translating strategy into execution across the product team, customer support, and all cross-functional engagements.
- Heading the product team end-to-end, owning the full SDLC from architecture and development through release, support, and iteration.
- Responsible for software development and maintenance across Web Automation, Java Automation, Windows Automation, OCR & IR-based Automation, Applet Automation, and SAP GUI Automation.

Sahi Pro

A no-code test automation platform capable of automating web browsers, mobile applications, web services, SAP, Java, Windows, and more. Built for reliability, Sahi Pro delivers non-flaky, low-maintenance automation with seamless switching between technologies, making it the ideal choice for end-to-end test automation across complex enterprise environments.

TestFlowCharts

A SaaS-based, no-code web browser automation platform offering capabilities similar to Sahi Pro, available on a pay-as-you-use model, lowering the barrier to entry for teams seeking flexible, scalable test automation without upfront licensing costs.

Sahi Pro Genaina

An AI-augmented test automation platform that seamlessly integrates human insight with artificial intelligence. Architected and partly developed by me, representing the next evolution of the Sahi Pro ecosystem.

Sahi Pro SAP

A dedicated test automation tool for SAP GUI applications, architected and single-handedly developed to address a significant gap in the market. Created a new revenue stream for the company and opened opportunities with enterprises seeking end-to-end automation that includes SAP GUI.

IT Analyst, Tata Consultancy Services Limited, December 2012 - October 2018

- Developed and maintained web and SAP GUI automation solutions across multiple internal products and client engagements.
- Conducted proof of concepts (POCs) to demonstrate automation capabilities for enterprise applications including MS Dynamics, Salesforce, SuccessFactors, Fiori, Ariba, SAP CRM, SAP SRM, SAP TM, and more, directly supporting sales and pre-sales efforts.
- Handled customer issues across a diverse global clientele, ensuring timely resolution and high satisfaction.

FastForward

An SAP AG-certified, no-code test automation tool for SAP GUI, web and Oracle applications. Delivered globally as an accelerator to TCS clientele including Gen Re, Honeywell, Hasbro, Bose, World Bank, Ericsson, Nielsen, Mitsubishi, Siemens, Garuda Indonesia, Moog Music, and more.

QuickConfig

A Robotic Process Automation (RPA) tool designed to configure various SAP modules to meet specific business needs, reducing manual configuration effort and human error across enterprise SAP environments.

EDUCATION, CERTIFICATIONS & TRAINING

- New Product Development, Indian Institute of Management (IIM), Bengaluru | Score: 76.3%
- TCS Leadership Program - Certified to build and lead high-performing project teams
- Bachelor of Engineering, Electronics and Telecommunications, Terna Engineering, Mumbai

RELEVANT SKILLS

- **Product & Platform:** No-Code/Low-Code Platform Strategy, Workflow Automation, AI-Augmented Product Development, Product Roadmapping, Product-Market Fit Management
- **Leadership Aligned:** Full SDLC Ownership, Agile Methodology, Cross-functional Collaboration, Pre-Sales, Customer Support, Team Leadership, Process Improvement
- **Technical:** Computer Vision & ML-based Automation, Enterprise SaaS Architecture, SAP Ecosystem, API & Integration, Generative AI, LLMs, Technical Architecture
- **Programming:** Java, JavaScript, C#, Windows Presentation Framework (WPF)
- **Tools:** AWS, Jenkins, Claude Code, Continue.dev, Bedrock, Docker, Kubernetes, Jira, etc.
- **Soft Skills:** Problem Solving, Enabling & Mentoring People, Stakeholder Management, Strategic Thinking, Communication

AWARDS & HONORS

- Best Performer 2025, Sahi Pro | Notably, two of the others were members of my team.
 - Code Warrior of Finale, TechGig Code Gladiators 2020 | Awarded for reaching the finals of one of India's largest coding competitions.
 - Outstanding Contribution Award, Tata Consultancy Services | Applauded at the organization level for exceptional performance.
 - Appreciation Award, Tata Consultancy Services | Recognized for fixing critical issues and coordinating effectively with the Gen Re offshore team in Chennai.
-
